Television report in Aragón TV - Tempero about the PAgFRUIT Project

On 06/12/2021, **Aragón TV** [<http://www.aragontelevision.es/>], in its **Tempero program** [<http://www.aragontelevision.es/programas/tempero/>], broadcast a report dedicated to the PAgFRUIT research project. The report was recorded in Raimat, where there is one of the experimental plots of super-intensive almonds (Alrasa farm). In the report, different members of the research team show how LiDAR data is acquired to map the canopy geometric structure and other parameters as leaf density. These data are processed to produce a map for the differential application of pesticides in the orchard. The PAgFRUIT research team want to acknowledge the Tempero team for its interest in the dissemination of our Precision Agriculture activities and research in relation to the PAgFRUIT Project.
